

I'm restarting from **Part 1** with stronger evidence, reasoning, and Claude-ready recommendations.

The PDF confirms these first five targets came from searches for **CP12 Wolverhampton** and **Boiler Service Wolverhampton**, with the listed rankings excluding Checkatrade-type directory results.

Competitor Research Database — Part 1

1. Homemove

Search used

CP12 Wolverhampton

Website

<https://homemove.com/surveys/gas-cp12-safety-certificate/wolverhampton/>

Search rank

Second organic result, excluding Checkatrade.

Core finding

Homemove is one of the strongest SEO competitors because it combines:

- exact service/location landing page
- clear “from” pricing
- instant quote/booking language
- Trustpilot trust signals
- heavy location-specific content
- internal links to many other gas safety location pages

This is not a local gas engineer website. It is a **property-services platform** using scalable SEO pages.

Services offered

Homemove offers far more than gas certificates. Their navigation includes:

- estate agents
- surveys
- energy switching
- mortgages
- removals
- cleaning
- legal/conveyancing
- broadband
- home insurance
- property tools including valuation, EPC checker, property risk calculator and mortgage calculator

Evidence: their site navigation lists these moving/property services and tools directly.

Reasoning

This means Homemove is not competing only as a gas engineer. They are competing as a **property transaction platform**. Their advantage is SEO scale and service bundling. Their weakness is that they are not emotionally or operationally local.

Pricing visibility

Strong.

They state:

- **Gas safety certificates start from £60 in Wolverhampton**

Evidence: their FAQ says “Our gas safety certificates start from £60 in Wolverhampton,” and the page also repeats that CP12 prices start from £60.

Reasoning

This is better than competitors who hide prices. However, “from £60” still creates uncertainty. Supreme Gas can beat this with clearer price tiers.

Booking process

Strong.

The page uses:

- “Get A Quote & Book”
- “Instant online quotes & booking”
- “Book online”
- “Choose a Wolverhampton slot”
- “We’ll price your survey in seconds”

Evidence: the page states “Instant online quotes & booking,” “Book online,” and says users choose a Wolverhampton slot.

Reasoning

This is one of the best booking journeys in the competitor set because it suggests self-serve booking, not just enquiry submission.

Weakness

It is still framed through Homemove’s broader “survey/property platform” model. Supreme Gas can make the CP12 journey feel more direct, local, and engineer-led.

SEO structure

Very strong.

They use:

- exact-match URL: </gas-cp12-safety-certificate/wolverhampton/>
- exact H1: **Gas Safety Certificate (CP12) in Wolverhampton**
- local Wolverhampton housing/property data
- CP12 legal explanation
- comparison table: gas safety certificate vs boiler service
- FAQs
- internal links to dozens of other city gas certificate pages

Evidence: the page has the Wolverhampton CP12 H1, local property-market section, FAQ section, and a large block linking to other gas safety certificate city pages.

Reasoning

This is why the page ranks. It does not rely on being a local engineer. It relies on structured, scalable content that matches search intent exactly.

Local pages

Very strong.

They have pages for many cities, including London, Plymouth, Liverpool, Glasgow, Sheffield, Coventry, Birmingham, Leicester, Leeds, Nottingham, Derby, Portsmouth, Northampton, Milton Keynes and Wolverhampton.

Reasoning

This is a scalable local SEO model. Supreme Gas should copy the structure but make the content more genuine, local, and conversion-focused.

Trust signals

Strong.

They show:

- **4.9 out of 5 on Trustpilot**
- Gas Safe registered engineers
- certificates within 24 hours
- press/media logos
- “trusted by thousands”
- company registration/FCA information in footer

Evidence: the page states “4.9 out of 5 star rating on Trustpilot,” “Gas Safe registered engineers,” and “certificates within 24 hours.”

Reasoning

Trust is strong, but broad-platform trust. It does not show a named local engineer, Gas Safe number, or Wolverhampton-based identity above the fold.

Customer journey

Google search

- lands on exact CP12 Wolverhampton page
- sees £60 starting price
- reads legal/local content
- clicks quote/book CTA
- gets online quote/booking route

Assessment

Good SEO journey. Good conversion journey. Weak local-emotional connection.

Weaknesses

1. **Not a true local gas engineer brand**
Homemove is a national-style property platform, not a Wolverhampton engineer. Their broad navigation proves gas safety is only one service among many.
 2. **Price is not fully fixed**
They say prices “start from £60,” which leaves uncertainty.
 3. **Page is long and SEO-heavy**
The page includes extensive legal, local housing, carbon monoxide, homeowner, FAQ and location content. This helps SEO but creates reading friction.
 4. **No strong named-engineer trust above the fold**
The page says Gas Safe engineers, but the immediate trust is platform-based, not person-based.
 5. **Likely subcontractor/network perception**
Since the site covers many cities and property services, customers may assume the engineer is allocated through a platform rather than directly local.
-

What Supreme Gas should copy

- Exact service/location pages.
 - “CP12 Wolverhampton” and “Gas Safety Certificate Wolverhampton” targeting.
 - Clear starting price.
 - Online quote/booking CTA.
 - FAQ section.
 - Legal compliance explanation.
 - Comparison table: CP12 vs boiler service.
 - Internal links to all local town pages.
 - Certificate turnaround promise.
 - Trust badges above the fold.
-

What Supreme Gas should do better

Claude implementation recommendation

Create a CP12 landing page with this structure:

Hero:

Gas Safety Certificate Wolverhampton from £45

Local Gas Safe engineer. Same-day digital CP12. Book online in under 60 seconds.

Trust row:

Gas Safe Registered | 20+ Years Experience | Wolverhampton Based | Same-Day Certificate | WhatsApp Updates

CTA:

[Book CP12 Now] [WhatsApp Engineer]

Instant pricing cards:

1 appliance CP12 — £45

2 appliances — £55

3 appliances — £65

CP12 + Boiler Service — £79/£85

Extra appliance — £10

Booking widget:

Postcode → appliance count → landlord/tenant details → choose slot → confirm booking.

Strategic advantage

Supreme Gas should position as:

Cheaper than platform sites, more local than national brands, faster than traditional engineers.

Scores

Category	Score
SEO	9.5/10
Conversion	8.5/10
Trust	8.5/10
Speed	8/10

Booking ease	8/10
Content quality	9/10

2. Shropshire Gas

Search used

CP12 Wolverhampton

Website

<https://www.shropshiregas.com/gas-safety-certificate-wolverhampton>

Search rank

Third organic result, excluding Checktrade.

Core finding

Shropshire Gas ranks with a dedicated Wolverhampton CP12 page, but the page is much weaker than Homemove. It has local keyword targeting, basic CP12 information, contact form, phone number, and trust through company identity.

Its biggest weakness is conversion: no visible price, no instant quote, no instant booking.

Services offered

Their menu includes:

- gas safety checks
- boiler breakdown cover
- boiler and central heating repairs
- heating contracts
- gas boiler installation/replacement
- central heating installation

- LPG heating systems
- oil heating systems
- fireplaces
- stoves
- gas fire servicing

Evidence: their service/navigation menu lists these categories.

Reasoning

They are a traditional heating company with broad service coverage. They are not only CP12-focused. That gives authority but weakens the immediacy for a landlord searching “CP12 Wolverhampton.”

Pricing visibility

Weak.

No CP12 price is shown on the Wolverhampton landing page. The page asks users to get in touch or call.

Reasoning

This creates a major conversion gap. A landlord searching CP12 usually wants speed and price. Hiding price forces a manual enquiry.

Booking process

Weak to moderate.

Booking options shown:

- “Get in Touch”
- call **01952 259 019**
- enquiry form with name, email, telephone, details, and preferred contact method

Evidence: the page has a “Book Your Gas Safety Certificate Today” section, phone number, and enquiry form fields.

Weakness

No:

- instant price

- live calendar
 - instant booking confirmation
 - WhatsApp
 - online payment/deposit
 - landlord dashboard
-

SEO structure

Moderate.

Strengths:

- exact page title/H1: **Gas Safety Certificate Wolverhampton**
- landlord-focused opening copy
- “Who needs a CP12 certificate?” section
- legal requirement mention
- internal links to gas safety and service pages

Evidence: the H1 is “Gas Safety Certificate Wolverhampton,” and the page directly targets landlords and letting agents.

Weaknesses:

- content is thin
 - no FAQ depth
 - no price section
 - no comparison table
 - no rich Wolverhampton local content
 - limited semantic coverage compared with Homemove
-

Local pages

Moderate.

They have a Wolverhampton-specific page, but the business address shown is in Wellington, Telford, Shropshire.

Reasoning

This is a ranking opportunity for Supreme Gas. If Supreme Gas can present itself as genuinely Wolverhampton/West Midlands local, it can appear more relevant and trustworthy.

Trust signals

Moderate to good.

They show:

- Gas Safe engineers
- full inspection of gas appliances
- pipework and flue testing
- CP12 certificate within 24 hours
- annual renewal reminders
- company number
- physical address
- phone number

Evidence: the “What’s Included” section lists full inspection, pipework/flue testing, written CP12 within 24 hours, and annual reminders.

Weakness

No visible Google rating/review count on the page. No named engineer. No Gas Safe number displayed in the extracted page text.

Customer journey

Google search

- CP12 Wolverhampton landing page
- basic compliance explanation
- user calls or submits enquiry form
- waits for reply

Assessment

This is old-style lead generation. Supreme Gas can beat it with self-serve booking.

Weaknesses

1. **No visible CP12 price**
Major issue for conversion.
2. **No instant booking**
User must submit enquiry or call.
3. **Not Wolverhampton-based**
Footer address is Telford/Shropshire.

4. **Thin content**

Compared with Homemove, the page has limited SEO depth.

5. **No review proof above fold**

Trust exists through company details, but not social proof.

6. **No modern landlord workflow**

No annual compliance portal, WhatsApp automation, tenant contact, renewal reminders beyond basic annual reminders.

What Supreme Gas should copy

- Dedicated CP12 Wolverhampton page.
 - “Certificate within 24 hours” promise.
 - Annual renewal reminders.
 - Landlord/letting-agent targeting.
 - Simple “what’s included” checklist.
 - Phone number and enquiry fallback.
-

What Supreme Gas should do better

Claude implementation recommendation

Add a **comparison block** directly under the hero:

Why landlords choose Supreme Gas over traditional companies:

Traditional CP12 company:

- Call or fill form
- Wait for reply
- No price shown
- Manual booking
- Certificate later

Supreme Gas:

- Fixed CP12 price shown
- Book online instantly
- WhatsApp confirmation
- Same-day digital certificate
- Automatic renewal reminder

Add pricing and booking components:

Component: CP12 Price Calculator

Inputs:

- Postcode
- Number of appliances
- Property type
- Tenant contact required? yes/no
- Urgent same-day? yes/no

Output:

- Fixed price
 - Available slots
 - Confirm booking button
-

Scores

Category	Score
SEO	7/10
Conversion	5/10
Trust	7/10
Speed	6/10
Booking ease	4.5/10
Content quality	6/10

3. Fact Services

Search used

CP12 Wolverhampton

Website

<https://factservices.co.uk/landlord-gas-safety-certificates-cp12/wolverhampton>

Search rank

Fourth organic result, excluding Checkatrade.

Core finding

Fact Services is a serious local competitor because it has a real Wolverhampton address, a dedicated landlord CP12 page, broad gas/plumbing services, and strong local service coverage.

It is weaker on conversion because it does not show fixed CP12 prices or instant booking.

Services offered

Fact Services offers a broad service base:

Plumbing and bathrooms

- emergency plumbers
- general plumbing repairs
- water system installations
- hidden leak detection
- underground leak detection
- bathroom refurbishments
- wet rooms
- walk-in showers
- bathroom tiling
- underfloor heating

Gas and heating

- all gas services
- boiler installations
- emergency boiler repairs
- boiler servicing
- central heating
- gas cookers and hobs
- gas fires
- smart heating controls

- landlord CP12 certificates
- gas testing and analysis

Commercial and thermal

- commercial gas engineers
- commercial boilers
- commercial catering gas
- gas interlock systems
- commercial CP42 certificates
- mobile catering LPG
- LPG caravan gas safety
- thermal imaging surveys
- heat loss surveys
- damp detection surveys
- boiler efficiency checks
- home energy surveys

Evidence: their navigation lists all of these service categories.

Reasoning

This is a broad trade-service website. Google may reward this because the site has topical authority around gas, plumbing, heating and compliance.

Pricing visibility

Weak.

They use “Get a Free Quote” and “Get An Estimate” CTAs, but no fixed CP12 price is visible in the analysed page content.

Reasoning

This is a direct weakness. Landlords often compare CP12 services by price and speed. Supreme Gas can win by showing the price immediately.

Booking process

Moderate.

They provide:

- phone number

- “Get a Free Quote”
- “Get An Estimate”
- local expert CTA

Evidence: the page shows “Get a Free Quote,” “Call Your Local Wolverhampton Expert,” and the phone number.

Weakness:

- no instant booking
 - no visible calendar
 - no WhatsApp-first flow
 - no immediate price
 - no automated confirmation
-

SEO structure

Strong.

The page targets:

- **Landlord Gas Safety Certificates CP12 in Wolverhampton**
- Wolverhampton
- West Midlands
- local expert positioning
- CP12 process explanation
- related services

Evidence: their H1/title area says “Landlord Gas Safety Certificates CP12 in Wolverhampton,” and the page repeatedly references Wolverhampton and the West Midlands.

Reasoning

This page matches search intent well. It is more locally authentic than Homemove because Fact Services has a Wolverhampton address.

Local pages/local relevance

Strong.

They list:

- address: **3 Helenny Close, Wolverhampton, WV11 1SN**

- local phone number
- “Serving Wolverhampton”
- “Local Wolverhampton Expert”

Evidence: the page header shows the Wolverhampton address and local phone number.

Reasoning

This is a real local competitor, not just a national/local SEO page. Supreme Gas needs to compete with stronger UX, price clarity and automation.

Trust signals

Strong.

They show:

- local address
- local phone number
- Gas Safe registered language
- inspection process
- immediate certificate claim after checks
- broad technical service list

Evidence: the page says their Gas Safe registered engineer carries out appliance, pressure, flue, ventilation and safety-device checks, then issues the Landlord Gas Safety Certificate.

Weakness

The trust is text-heavy. It does not appear to use strong visual proof above the fold such as:

- Google review widget
 - engineer photo
 - Gas Safe ID card image
 - job photos
 - real certificate sample
 - booking count
 - “X landlords served”
-

Customer journey

Google search

→ local CP12 Wolverhampton page

→ sees local phone/quote CTA

- reads inspection process
- calls or requests estimate
- manual booking

Assessment

Good local trust. Average conversion speed.

Weaknesses

1. **No fixed CP12 price**
They ask users to request a quote/estimate.
 2. **No instant booking**
The page does not show live slots or self-serve scheduling.
 3. **Heavy text blocks**
The inspection process is detailed but not fast to scan.
 4. **No obvious Google review proof above the fold**
A local service business needs visible social proof.
 5. **Broad-service site may dilute CP12 focus**
They offer many services across plumbing, bathrooms, gas, commercial and thermal.
 6. **No landlord automation system**
No visible tenant contact handling, annual reminders, certificate vault, portfolio management or auto-invoicing.
-

What Supreme Gas should copy

- Wolverhampton-first page.
 - Local phone number.
 - Local expert positioning.
 - Detailed CP12 inspection explanation.
 - Broad gas service ecosystem.
 - Emergency repair connection.
 - "Gas Safe engineer" messaging.
-

What Supreme Gas should do better

Claude implementation recommendation

Create a **landlord-first CP12 page** separate from homeowner boiler pages:

Hero:
Landlord Gas Safety Certificate Wolverhampton
CP12 from £45. Same-day digital certificate. Tenant contact handled for you.

- Sections:
- 1. Instant CP12 booking widget
 - 2. Fixed pricing table
 - 3. What is checked during CP12
 - 4. What happens if it fails
 - 5. Repairs available after failed inspection
 - 6. Tenant access/communication process
 - 7. Annual renewal reminder
 - 8. Multi-property landlord booking
 - 9. FAQs
 - 10. Local areas covered

Add a landlord workflow diagram:

Book CP12 → We contact tenant → Engineer attends → Certificate issued → Invoice sent
→ Reminder set for next year

Scores

Category	Score
SEO	8/10
Conversion	6/10
Trust	8/10
Speed	6/10
Booking ease	5/10

Content quality	7.5/10
-----------------	--------

4. Hello BoilerServe

Search used

Boiler Service Wolverhampton

Website

<https://www.helloboilerserve.co.uk/>

Search rank

Second organic result, excluding Checkatrade.

Core finding

Hello BoilerServe is strong on personality, reviews, WhatsApp, response speed, and boiler-replacement conversion. It is less strong as a CP12/landlord compliance competitor.

This is a good model for Supreme Gas to learn from visually and emotionally, but Supreme Gas should build a cleaner, more scalable platform.

Services offered

They offer:

- compare boilers
- new boilers
- smart homes
- book a service
- book a repair
- plumbing and heating
- cookers, hobs and fires
- landlords CP12
- online calculator
- book a survey

Evidence: their homepage service blocks list these options directly.

Reasoning

This is a homeowner-first heating site with landlord CP12 as a secondary service.

Pricing visibility

Mixed.

They show strong conversion claims:

- “Get a Quote in 60 Seconds”
- “Get a quote in less than 60 seconds”
- “60 mins average response time”
- “100s boilers replaced”
- “5/5 positive reviews”

Evidence: these claims appear on the homepage.

But fixed pricing for boiler service/CP12 is not clearly shown in the extracted homepage text.

Reasoning

They are strong at reducing uncertainty around response speed but weaker at displaying exact service prices.

Booking process

Good.

They provide:

- online quote
- online calculator
- book a survey
- book a service
- call options
- WhatsApp links

Evidence: the page includes “Online Quote,” “Online Calculator,” “Book a Survey,” “Book a Service,” “Call Dave,” and WhatsApp links.

Weakness

The strongest flow seems boiler-replacement-focused. The CP12 journey is not as dominant.

SEO structure

Moderate.

Strengths:

- homepage title targets boiler replacements/servicing Wolverhampton
- service blocks cover core keywords
- review content
- local alternative positioning
- boiler brand content

Weaknesses:

- homepage targets many services at once
- no strong evidence from homepage of one specific “boiler service Wolverhampton” landing page being the core ranking page
- some buttons appear as generic “Button” in extracted text, which may indicate accessibility/semantic issues

Evidence: multiple service cards appear with “Button” labels in the text extraction.

Local relevance

Strong personality-local.

They state:

- BoilerServe has replaced boilers in Wolverhampton for over 10 years
- local alternative to national boiler companies
- all work carried out by Dave
- no subcontractors

Evidence: the page says “Replacing Boilers in Wolverhampton for over 10 years,” “Your Local Alternative to National Boiler Companies,” “We do not use any subcontractors,” and “All work is carried out by Dave.”

Reasoning

This is strong trust positioning. The weakness is scalability: “all work carried out by Dave” creates capacity limits.

Trust signals

Strong.

They show:

- 5/5 positive reviews
- 100s boilers replaced
- 60-minute average response time
- named engineer Dave
- no subcontractors
- testimonials with named customers
- local positioning

Evidence: those claims and testimonials are visible on the page.

Customer journey

Google search

- homepage
- sees local engineer trust
- clicks book service/repair/quote
- uses call, WhatsApp or online quote

Assessment

Strong emotional conversion. Less structured for landlord CP12 and scalable SEO.

Weaknesses

1. **Homepage tries to do too much**
New boilers, servicing, repairs, smart homes, CP12, cookers/hobs and survey all compete for attention.
2. **CP12 is secondary**
Landlords CP12 appears as one service card, not the primary customer journey.
3. **No clear fixed CP12/boiler service pricing in extracted page text**
4. **Capacity limitation**
“All work is carried out by Dave” builds trust but limits scale.
5. **Some SEO/accessibility weakness**
Repeated generic “Button” labels are visible in extraction, which can reduce clarity for crawlers and screen readers.

What Supreme Gas should copy

- named engineer/family-run trust
 - WhatsApp contact
 - response-time promise
 - “local alternative to national companies”
 - review/testimonial blocks
 - online quote/calculator idea
 - clear service cards
-

What Supreme Gas should do better

Claude implementation recommendation

Use their personality trust, but make it scalable:

Hero:

Wolverhampton's Local Gas Safe Engineer

CP12s, boiler servicing, repairs and installs — booked online in under 60 seconds.

Trust:

Family-run | 20+ years experience | Gas Safe registered | Same-day certificates | WhatsApp updates

Primary customer paths:

[Landlord CP12]

[Boiler Service]

[Boiler Repair]

[New Boiler Quote]

Build separate journeys:

Landlords:

CP12 → tenant access → digital certificate → renewal reminder

Homeowners:

Boiler service → choose slot → reminder next year

Repairs:

Fault description → urgency → engineer callout → quote

Scores

Category	Score
SEO	7/10
Conversion	7.5/10
Trust	8.5/10
Speed	8/10
Booking ease	7/10
Content quality	7/10

5. Andy The Gas

Search used

Boiler Service Wolverhampton

Website

<https://andythegas.co.uk/>

Search rank

Third organic result, excluding Checkatrade.

Core finding

Andy The Gas is a traditional local trust competitor. It has strong longevity, Gas Safe/Worcester trust, local contact details and testimonials, but weak modern conversion.

This is the kind of competitor Supreme Gas can beat with speed, design, pricing and booking automation.

Services offered

They offer:

- boiler installation
- boiler repair
- boiler servicing
- powerflushing
- central heating installations and upgrades
- general plumbing
- emergency plumbing
- gas plumbing
- pre-purchase heating inspections
- energy efficiency advice
- gas safety inspections
- hob and gas oven installations
- unvented cylinder installations
- mains accumulative cylinder installation
- pump installations
- burst pipe repairs
- underfloor heating installations

Evidence: their “Our Services Include” section lists these services.

Pricing visibility

Weak.

The page asks users to contact them or call to obtain a free estimate/quotation. No fixed boiler service or CP12 price is shown in the extracted page text.

Reasoning

This is common for older trade websites. Supreme Gas should make price transparency a core differentiator.

Booking process

Weak.

Booking/contact routes:

- phone number
- mobile number
- contact page
- free estimate/quotation

Evidence: phone/mobile numbers and contact/quotation instruction are visible.

No evidence of:

- instant booking
 - online price calculator
 - WhatsApp
 - live calendar
 - automated confirmation
 - online deposit/payment
-

SEO structure

Moderate.

Strengths:

- homepage title targets boiler installation/general plumbing Wolverhampton
- local area coverage
- service list includes boiler servicing and gas safety inspections
- testimonials
- accreditation section

Weaknesses:

- no focused “boiler service Wolverhampton” landing page visible from homepage evidence
 - no pricing
 - no FAQ section visible in extracted page
 - no deep local pages
 - older design/structure
-

Local relevance

Good.

They cover:

- Wolverhampton
- South Staffordshire
- Shropshire

They also show a Codsall/Wolverhampton address.

Reasoning

This is a local, real-world trust competitor. But it does not look designed for rapid online conversion.

Trust signals

Strong.

They show:

- established for over 43 years
- fully insured
- Worcester Bosch Accredited
- Gas Safe registered
- customer testimonials
- physical address
- phone/mobile numbers

Evidence: their “Why Choose Us” section states they have been established for over 43 years, are fully insured, Worcester Bosch Accredited and Gas Safe registered.

Customer journey

Google search

- homepage
- sees traditional trust/accreditations
- calls for quotation
- manual booking

Assessment

Good for older homeowners. Weak for landlords and younger users who want instant price and booking.

Weaknesses

1. **No visible pricing**
Users must request a quote.
 2. **No instant booking**
 3. **No WhatsApp-first flow**
 4. **No landlord-specific compliance workflow**
 5. **No strong modern UX**
 6. **No visible online review widget**
Testimonials exist, but not a live Google review count.
 7. **No automation**
No reminders, digital certificate workflow, ETA updates or landlord dashboard.
-

What Supreme Gas should copy

- longevity/experience positioning
 - Gas Safe and manufacturer accreditation
 - testimonials
 - local address/contact visibility
 - broad service coverage
 - clear “only use Gas Safe registered engineer” safety message
-

What Supreme Gas should do better

Claude implementation recommendation

Build a modern version of this trust model:

Trust section:

20+ years gas engineering experience

Gas Safe registered

Family-run Wolverhampton business

Fully insured

Real customer reviews

Real work photos

Digital certificates and invoices

Add conversion layer Andy lacks:

Sticky mobile CTA:

[Book Online] [Call] [WhatsApp]

Every service page includes:

- fixed starting price
- time required
- what is included
- what is not included
- available slots
- FAQ
- related upsells

For boiler service page:

Boiler Service Wolverhampton from £70

Book online in 60 seconds.

Includes safety checks, flue gas analysis, visual inspection, service record and annual reminder.

Scores

Category	Score
SEO	6.5/10
Conversion	5/10
Trust	8/10
Speed	5/10
Booking ease	4/10
Content quality	6.5/10

Part 1 Summary: What Claude Should Learn

Competitor pattern

Competitor	Main strength	Main weakness
Homemove	SEO scale + instant quote framing	Not truly local
Shropshire Gas	Dedicated CP12 page + compliance basics	No price, no instant booking
Fact Services	Real Wolverhampton local trust	No fixed pricing/booking automation
Hello BoilerServe	Personality trust + WhatsApp + reviews	CP12 not primary, less scalable
Andy The Gas	Longstanding local trust	Old-school manual conversion

Supreme Gas Advantage Strategy

Website positioning

Supreme Gas should not copy one competitor. It should combine the best parts:

- Homemove SEO structure
- + Fact Services local authority
- + Hello BoilerServe personality/trust
- + Andy The Gas experience/accreditation
- + better booking automation than all of them

Claude design instruction

Build the website around **three layers**:

1. SEO layer

Create dedicated pages for:

/gas-safety-certificate-wolverhampton
/cp12-wolverhampton
/landlord-gas-safety-certificate-wolverhampton
/boiler-service-wolverhampton
/boiler-repair-wolverhampton
/gas-engineer-wolverhampton
/gas-safety-certificate-bilston
/gas-safety-certificate-walsall
/gas-safety-certificate-dudley
/gas-safety-certificate-willenhall
/gas-safety-certificate-wednesfield

2. Conversion layer

Every service page must include:

Hero with fixed starting price
Instant booking widget
Sticky mobile CTA
WhatsApp button
Google reviews
Gas Safe number
Real engineer photo
Same-day/next-day availability indicator
FAQ section
Local areas covered

3. Automation layer

Build functions competitors lack:

Instant quote calculator
Live appointment slot selection
Tenant contact collection
Automated WhatsApp/SMS confirmation
Engineer ETA window
Digital CP12 upload/email
Invoice generation
Annual renewal reminder
Landlord multi-property dashboard

Core offer to beat Part 1 competitors

Gas Safety Certificate Wolverhampton from £45

Book online in under 60 seconds.

Same-day digital certificate.

Local Gas Safe engineer.

Repairs available if the inspection fails.

Annual reminder included.

Send “**continue Part 2**” and I’ll cover **WLV Heating, WolverhamptonGasEngineer, NK Gas, Nationwide Surveyors, OpenRent, GasSafetyCerts, and Checkatrade/directories** in the same evidence-backed structure.

Competitor Research Database — Part 2

The PDF confirms these Part 2 targets came from searches for **Boiler Service Wolverhampton**, **Gas Engineer Wolverhampton**, and **Landlord Gas Safety Certificate Wolverhampton**. It lists WLV Heating, British Gas, J & E Heating & Gas Services, NK Gas Service, Nationwide Surveyors, OpenRent, and GasSafetyCerts as the next competitor targets.

6. WLV Plumbing & Heating

Search used

Boiler Service Wolverhampton

Website

<https://wlvheating.co.uk/>

Search rank

Fifth organic result after excluding Checkatrade-type directory results.

Core finding

WLV is one of the strongest **local brand competitors** in the Wolverhampton/West Midlands heating market.

They are not just trying to rank for one keyword. Their website is built like a proper local heating company with:

- strong brand identity
- broad service navigation
- reviews/social proof
- visible care-plan pricing
- fixed boiler installation price anchors
- WhatsApp booking/contact
- service pages
- case studies
- local area coverage
- strong team/company presentation

This is a more dangerous competitor than older local engineers because it combines trust, design, content and conversion.

Services offered

WLV's navigation and homepage show:

- boiler installations
- boiler servicing
- boiler repairs
- gas safety inspections
- plumbing services
- care plans / Comfort Club
- air conditioning
- heat pumps

Evidence: their main navigation lists "New Boilers," "Boiler Servicing," "Boiler Repair," "Gas Safety Inspections," "Care Plans," "Air Conditioning," and "Heat Pumps."

They also state that WLV provides boiler installations, boiler servicing, boiler repairs, plumbing and heat pump services across Wolverhampton and the wider West Midlands.

Reasoning

This gives WLV topical authority. Google sees them as a complete plumbing/heating business rather than a thin CP12-only landing page.

Supreme Gas implication

Supreme Gas should not only build CP12 pages. It needs a full service structure:

Core services:

- CP12 Gas Safety Certificate
- Boiler Service
- Boiler Repair
- Boiler Installation
- Gas Engineer Wolverhampton
- Landlord Compliance

Future expansion:

- EICR partner page
 - EPC partner page
 - Plumbing partner page
 - Heat pump page later if relevant
-

Pricing visibility

Strong in some areas, weaker in others.

WLV shows fixed boiler installation guide prices:

- Easy Heat Range: **£2,000**
- Cosy Home Range: **£2,370**
- Cosy Home Plus: **£2,560**

Evidence: the homepage lists the Easy Heat Range at £2000, Cosy Home Range at £2370, and Cosy Home Plus at £2560.

They also show care-plan pricing:

- Budget Service Plan: **£12.99/month**
- Basic Service Plan: **£22.99/month**
- Premium Service Plan: **£29.99/month**

Evidence: their Comfort Club section lists those monthly prices and included features.

Reasoning

This is strong because pricing reduces friction. They are training users to trust them before contact.

Weakness

Their pricing is strongest for **boiler installations and care plans**, not necessarily for one-off CP12/boiler service booking. This is where Supreme Gas can be clearer.

Booking process

WLV allows users to:

- fill in a website form
- call the office
- message on WhatsApp

Evidence: their FAQ says users can fill in the form, call **01902 283124**, or message WhatsApp on **07395 088121**.

Strength

WhatsApp is a strong conversion tool because many local customers prefer messaging over forms.

Weakness

There is no verified live slot calendar or instant self-serve booking from the evidence. It is still likely:

Contact → manual response → booking arranged

Claude recommendation for Supreme Gas

Supreme Gas should copy the WhatsApp option, but automate it.

WhatsApp booking flow:

User taps WhatsApp

Bot asks:

1. Which service? CP12 / Boiler service / Repair
2. Postcode?
3. Number of gas appliances?
4. Landlord or homeowner?
5. Tenant contact details?
6. Preferred date?
7. System gives available slots
8. Booking confirmed

Website implementation:

Sticky mobile CTA:

[Book Online] [WhatsApp] [Call]

SEO structure

Strong.

WLV uses a proper service architecture:

Home

About

Reviews

Meet team

Case studies

Boilers

Boiler servicing

Boiler repair

Gas safety inspections

Care plans

Plumbing

Heat pumps

Air conditioning

Contact

Evidence: the navigation includes Reviews, Meet WLV Team, Case Studies, Boiler Servicing, Boiler Repair, Gas Safety Inspections, Comfort Club, Plumbing, Air Conditioning and Heat Pumps.

Reasoning

This helps Google understand site depth and service authority. It also improves user journey because customers can choose the specific problem they have.

Supreme Gas implementation

Claude should build a site architecture like:

Main nav:

Home

Services

Pricing

Landlords

Areas

Reviews

About

Contact

Book Online

Services dropdown:

- Gas Safety Certificate CP12
- Landlord Gas Safety Certificate
- Boiler Service
- Boiler Repair
- New Boiler Installation
- Gas Engineer Wolverhampton

Areas dropdown:

- Wolverhampton
 - Bilston
 - Wednesfield
 - Willenhall
 - Walsall
 - Dudley
 - West Bromwich
 - Birmingham
-

Local pages / local relevance

WLV positions itself across:

- Wolverhampton
- West Midlands
- Dudley
- Walsall
- Birmingham

Evidence: the homepage repeatedly says Wolverhampton and West Midlands; the footer lists serving Wolverhampton, Dudley, Walsall and Birmingham.

Their address is listed as **Wood Farm, Gospel End Rd, Dudley DY3 4HA**.

Reasoning

They are local/regional rather than national. This is a real local competitor. However, the address being Dudley means Supreme Gas can still compete by being more Wolverhampton-first if the service area is Wolverhampton-focused.

Trust signals

Very strong.

WLV shows:

- average from **1000 happy customer reviews**
- rated **4.9 out of 5**
- “West Midlands most reviewed boiler company”
- testimonials
- trusted boiler brand logos: ATAG, Ideal, Vaillant, Viessmann, Worcester Bosch
- team/director imagery
- Gas Safe registered engineers
- case studies

Evidence: WLV states “Average from 1000 Happy Customer Reviews,” “Rated 4.9 out of 5,” and “West Midlands most reviewed boiler company.” They also show boiler brand logos and customer testimonials.

Reasoning

This is one of the strongest trust setups in the competitor set. It makes the company feel established, reviewed, and professional.

Weakness

Their trust is heating-company focused, not landlord-compliance focused.

Supreme Gas should build a **landlord-specific trust layer**:

Trusted by Wolverhampton landlords
Same-day CP12 PDFs
Tenant access handled
Annual renewal reminders
Portfolio discounts
Digital certificate storage

Customer journey

Current WLV journey:

Google search
→ WLV homepage / service page
→ sees reviews, services, care plans, pricing anchors
→ contacts through form, phone, or WhatsApp
→ manual booking

Assessment

Strong trust. Good service positioning. Booking still not fully automated.

Weaknesses

1. **Not CP12-first**
WLV is strongest for boiler installation, servicing, plumbing and care plans.
CP12/gas safety inspections are present, but not the main commercial focus.
 2. **No verified live calendar**
Their own FAQ says booking is via form, call or WhatsApp, not instant calendar booking.
 3. **One-off CP12/boiler service pricing is not as visually dominant as care plans**
Installation and care plan pricing is strong, but Supreme Gas can be more aggressive for CP12.
 4. **Regional, not purely Wolverhampton**
They serve multiple West Midlands areas and list a Dudley address.
 5. **Could feel premium rather than cheapest/fastest**
This leaves space for Supreme Gas to target landlords who want fast, compliant, affordable CP12s.
-

What Supreme Gas should copy

- strong review display
 - brand/trust logos
 - team photos
 - service-page structure
 - care-plan idea
 - WhatsApp contact
 - case studies
 - clear homepage service cards
 - pricing transparency
 - FAQ section
 - “local Gas Safe team” language
-

What Supreme Gas should do better

Claude implementation recommendation

Create a landlord compliance version of WLV’s trust model:

Hero:

Gas Safety Certificate Wolverhampton from £45

Book online in under 60 seconds. Same-day digital CP12.

Trust block:

Gas Safe Registered

20+ Years Experience

Family-run Wolverhampton business

Google-rated local engineer

Same-day certificates

Annual reminders included

Add a landlord compliance plan:

Landlord Compliance Plan:

- Annual CP12 reminder
- Tenant access handled
- Certificate stored digitally
- Invoice emailed automatically
- Priority booking
- Multi-property discounts

Add care-plan equivalent for homeowners:

Homeowner Boiler Care:

- Annual boiler service
- Service reminder
- Priority repair slot

- Discount on future work

Scores

Category	Score
SEO	8/10
Conversion	8/10
Trust	9/10
Speed	7/10
Booking ease	7/10
Content quality	8/10

7. British Gas

Search used

Gas Engineer Wolverhampton

Website

Sponsored Google result.

Search rank

Top sponsored result.

Core finding

British Gas is not a local website competitor. It is a **national brand/PPC competitor**.

They compete for the same customer search intent, but their model is different:

- massive national brand
- paid ads
- online booking
- engineer network
- HomeCare subscriptions
- boiler service/repair/gas safety packages

They are not beatable on brand recognition. They are beatable on:

- price
 - local speed
 - personal service
 - direct communication
 - landlord CP12 simplicity
-

Services offered

British Gas offers:

- boiler service
- boiler repair
- plumbing and drains repairs
- electrics/appliance repairs
- landlord gas safety services
- EICR
- HomeCare cover
- engineer tracking

Evidence: British Gas's booking page covers boiler/heating, plumbing/drains, electrics/appliance repair and engineer appointment booking. Its landlord/compliance offering also includes gas safety and related services.

Reasoning

British Gas has huge trust and broad service coverage. However, national systems often feel less personal and may involve higher pricing.

Pricing visibility

British Gas usually shows clear pricing for boiler servicing and service plans. In earlier competitor checks, visible pricing included annual boiler service and one-off boiler service pricing. Because pricing can change, Supreme Gas should check British Gas pricing monthly before making direct comparison claims.

Supreme Gas implication

Do **not** say “cheaper than British Gas” unless pricing is actively verified. Instead say:

Local alternative to national boiler companies.
Direct Wolverhampton Gas Safe engineer.
Clear pricing. Fast booking. Same-day digital certificate.

Booking process

British Gas has strong national booking infrastructure, including online/app booking and engineer appointment management. This is a feature Supreme Gas should copy at a simpler local level.

Claude implementation

Build “British Gas-style convenience” without the national friction:

Customer receives:

1. Booking confirmation
 2. Reminder before appointment
 3. Engineer on-the-way message
 4. 2-hour ETA window
 5. Digital certificate/invoice after job
 6. Renewal reminder next year
-

Trust signals

British Gas has unmatched brand trust. Supreme Gas should not try to look bigger than British Gas.

Correct positioning

British Gas-level professionalism.
Local engineer speed.
Wolverhampton pricing.
Direct WhatsApp communication.

Weaknesses

1. **National, not local**
 2. **Less personal**
 3. **Potentially more expensive**
 4. **May use call-centre-style communication**
 5. **Landlord CP12 journey may feel more corporate than direct**
 6. **Not optimised for “I need a quick local CP12 this week” as strongly as a local specialist could be**
-

What Supreme Gas should copy

- engineer tracking idea
 - online booking
 - reminders
 - service plan/recurring revenue model
 - strong compliance language
 - clean trust-first design
-

What Supreme Gas should do better

Local CP12 booking:

- fixed price from £45
 - local Gas Safe engineer
 - WhatsApp confirmation
 - same-day PDF certificate
 - repairs available if failed
 - annual renewal reminder
-

Scores

Category	Score
SEO/PPC visibility	9/10
Conversion	8/10

Trust	10/10
Speed	7/10
Booking ease	8/10
Content quality	8/10

8. J & E Heating & Gas Services

Search used

Gas Engineer Wolverhampton

Website

<https://www.wolverhamptongasengineer.com/>

Search rank

Second organic result.

Verification note

The website loaded a verification page only:

“Please wait while your request is being verified...”

Evidence: the direct page fetch returned only a loader and verification message.

Therefore, I will not make unsupported claims about the full website content. The analysis below is limited to what can be verified from the accessible page and the search context in the uploaded PDF.

Core finding

This competitor's biggest verified SEO strength is its **exact-match domain**:

wolverhamptongasengineer.com

That directly matches the search intent **Gas Engineer Wolverhampton**.

Reasoning

Exact-match domains can still help click-through and relevance perception. A user searching "gas engineer Wolverhampton" sees a domain that says exactly that.

Services offered

Not fully verifiable from the accessible website fetch because the page was blocked by verification. The uploaded PDF confirms it appeared for **Gas Engineer Wolverhampton**, but does not list services.

Supreme Gas response

Do not rely on exact-match domain alone. Build exact-match landing pages:

/gas-engineer-wolverhampton
/wolverhampton-gas-engineer
/emergency-gas-engineer-wolverhampton
/gas-safe-engineer-wolverhampton

Pricing visibility

No verified pricing from accessible page content.

Supreme Gas advantage

Add visible pricing where possible:

CP12 from £45
Boiler service from £70
Repair diagnosis from £X

Booking process

No verified booking flow from accessible page content.

Supreme Gas advantage

Make booking impossible to miss:

Header:

[Book Online] [WhatsApp] [Call]

Sticky mobile:

Book CP12 | Call | WhatsApp

SEO structure

Verified strength

The domain itself is exact-match for the search query. The PDF confirms it ranked second organically for **Gas Engineer Wolverhampton**.

Weakness

If users or crawlers encounter verification/loader barriers, it can harm user experience and may block some forms of automated crawling/testing. The page fetch returned only a verification loader.

Customer journey

Likely:

Google search

→ exact-match domain

→ user expects local gas engineer

→ website verification/loader risk

→ contact/call if page loads

Assessment

The domain is strong. The accessible user experience is weak from the test.

Weaknesses

1. **Verification/loader page appeared during access**
This creates friction and makes the site harder to analyse or crawl.
 2. **No verified visible pricing**
 3. **No verified instant booking**
 4. **No verified trust signals from accessible page**
 5. **Dependent on exact-match domain rather than modern UX**
-

What Supreme Gas should copy

- exact-match keyword targeting
 - local gas engineer positioning
 - simple user expectation: "I searched gas engineer Wolverhampton; this site matches exactly."
-

What Supreme Gas should do better

Claude recommendation

Create a page that captures the same intent better:

Page: /gas-engineer-wolverhampton

Hero:

Gas Engineer Wolverhampton

Local Gas Safe engineer for CP12s, boiler servicing, repairs and installations.

CTA:

Book Online

WhatsApp

Call Now

Sections:

- Services
 - Prices
 - Emergency support
 - Gas Safe registration
 - Areas covered
 - Reviews
 - FAQs
-

Scores

Category	Score
SEO	8/10
Conversion	4/10
Trust	5/10 verified
Speed	4/10 verified
Booking ease	3/10 verified
Content quality	4/10 verified

9. NK Gas Service

Search used

Gas Engineer Wolverhampton

Website

<https://nkgasservice.co.uk/>

Search rank

Third organic result.

Core finding

NK Gas is a direct and serious local competitor.

They are strong because they combine:

- clear service menu
- phone and WhatsApp
- Gas Safe number in the header
- emergency response positioning
- upfront price/no-hidden-fees messaging
- reviews
- local areas
- separate pages for services/pricing/areas/reviews/blog

This is one of the best local competitor structures to learn from.

Services offered

NK Gas offers:

- boiler repair
- emergency boiler repair
- boiler installation
- annual boiler service
- gas fire servicing
- gas cooker installation
- gas hob installation
- range cooker installation
- cooker disconnection
- gas safety certificates / CP12
- mobile catering gas certificate
- landlord gas safety
- gas leak detection

Evidence: their navigation lists each of these services directly.

Reasoning

This is a strong SEO/service architecture. It covers homeowner, landlord, emergency and appliance-specific intent.

Supreme Gas implication

Supreme Gas should copy the structure but improve booking automation and design.

Pricing visibility

Moderate to strong.

NK Gas has a dedicated **Pricing** page in navigation. Evidence: the site navigation includes “Pricing.”

They also use upfront pricing language:

- “No Hidden Fees”
- “Price quoted upfront”

Evidence: the homepage shows “No Hidden Fees” and “Price quoted upfront.”

Reasoning

This reduces pricing anxiety. However, if exact CP12 prices are not visible above the fold, Supreme Gas can still be clearer.

Booking process

NK Gas offers:

- phone
- WhatsApp
- call now
- 7-days-a-week answering claim
- same-day visit for emergencies

Evidence: the site shows “Call 07404 922458” and “WhatsApp Us.” Their “How It Works” section says customers call or WhatsApp, and that they answer 7 days a week.

Strength

This is strong for emergency repairs.

Weakness

The process is still not verified as instant self-serve booking. It says:

Call or WhatsApp → they book you in → same-day visit often for emergencies

Evidence: their process says “Call or WhatsApp,” then “We’ll book you in.”

Supreme Gas implementation

Build a self-serve version:

Book Online:

Service → postcode → appliance count/problem type → slot → confirmation

Keep WhatsApp as a second path:

WhatsApp:

AI collects details and creates draft job automatically.

SEO structure

Strong.

Navigation includes:

Home
Services
Pricing
Areas
About
Reviews
Blog
Contact

Evidence: this structure is visible in the navigation.

Reasoning

This is the right structure for a local gas company. It allows Google to crawl individual service intent and location intent.

Supreme Gas recommendation

Use the same architecture but with stronger landlord-specific pages:

Services:

- CP12 Gas Safety Certificate
- Landlord Gas Safety Certificate
- Boiler Service
- Boiler Repair
- Emergency Boiler Repair
- Boiler Installation
- Cooker/Hob Install
- Gas Leak Detection

Landlords:

- CP12
- Multi-property bookings
- Tenant access handling

- Annual reminders
 - Digital certificate storage
-

Local pages / local relevance

NK Gas says:

- based in Darlaston
- serving the West Midlands
- areas include Wolverhampton, Walsall, Cannock, Birmingham, Dudley, West Bromwich

Evidence: the homepage says “Based in Darlaston, serving the West Midlands” and lists those areas.

Reasoning

They are local/regional and relevant to Wolverhampton.

Supreme Gas response

Supreme Gas should appear more Wolverhampton/BSCJ-local if that is the focus:

Wolverhampton-based family gas engineer

Serving Bilston, Wednesfield, Willenhall, Walsall, Dudley and West Bromwich

Trust signals

Strong.

NK Gas shows:

- phone number
- email
- **24/7 Emergency**
- **Gas Safe #568305**
- 2–4 hour emergency response
- no hidden fees
- 149+ 5-star reviews
- same-day repairs
- all major boiler brands
- WhatsApp

Evidence: the top bar shows phone/email, 24/7 emergency and Gas Safe #568305. Their trust section states 2–4 hour response, no hidden fees, 149+ 5-star reviews and Gas Safe #568305.

Reasoning

This is a good competitor benchmark. They show the exact things users care about:

Can I trust you?

Are you certified?

Can you come quickly?

Will you be expensive/unclear?

Can I contact you easily?

Customer journey

Current NK journey:

Google search

→ NK Gas homepage

→ sees Gas Safe number, emergency messaging, reviews

→ chooses call or WhatsApp

→ company books manually

→ engineer attends

Assessment

Strong manual conversion. Weak compared with a fully automated platform.

Weaknesses

1. **No verified instant online booking**
 2. **Manual call/WhatsApp workflow**
 3. **No visible landlord compliance dashboard**
 4. **No visible tenant-contact automation**
 5. **Emergency/repair positioning may dominate over CP12**
 6. **No live calendar shown from evidence**
 7. **No visible route optimisation/ETA system**
 8. **Pricing page exists, but exact CP12 price should ideally be shown directly on CP12 pages**
-

What Supreme Gas should copy

- Gas Safe number in header
- WhatsApp button
- pricing page

- services dropdown
 - areas page
 - reviews page
 - 2–4 hour response style claim if operationally true
 - no hidden fees
 - same-day repairs
 - major boiler brand coverage
 - emergency support positioning
-

What Supreme Gas should do better

Claude implementation recommendation

Header:

Left: BSCJ Gas & Heating logo

Centre nav: Services | Pricing | Landlords | Areas | Reviews | About

Right: Gas Safe # | Book Online | WhatsApp | Call

Hero:

Gas Safety Certificate Wolverhampton from £45

Book online in under 60 seconds.

Same-day digital CP12. Local Gas Safe engineer.

Booking system:

Step 1: Select service

Step 2: Enter postcode

Step 3: Select appliances/problem

Step 4: Choose slot

Step 5: Add landlord/tenant details

Step 6: Confirm booking

Landlord automation:

Tenant contact handled

Certificate emailed same day

Invoice generated automatically

Reminder scheduled for 11 months

Multi-property booking support

Scores

Category	Score
SEO	8/10
Conversion	7.5/10
Trust	8.5/10
Speed	8/10
Booking ease	6.5/10
Content quality	7.5/10

10. Nationwide Surveyors

Search used

Landlord Gas Safety Certificate Wolverhampton

Website

<https://nationwide-surveyors.org.uk/service/electrical-installation-condition-report>

Search rank

Top sponsored result.

Core finding

Nationwide Surveyors is not a local gas engineer. It is a **national compliance/survey platform** using paid ads.

Important issue: the PDF's ad URL for a **landlord gas safety certificate Wolverhampton** search points to an **EICR page**, not a dedicated CP12 Wolverhampton page.

This creates a possible intent mismatch.

Services offered

The analysed page is primarily for:

- Electrical Installation Condition Report / EICR
- EICR for landlords, buyers and sellers
- EICR for domestic and commercial properties
- PAT
- EPC
- Gas Safety Certificate inside bundles

Evidence: the page H1 is "Electrical Installation Condition Report (EICR)," and the hero mentions EICR for landlords, buyers, sellers, domestic and commercial properties.

They also offer bundles:

- EICR + PAT from £129
- EICR + EPC from £129
- EICR + PAT + Gas Safety Certificate from £199
- EICR + EPC + Gas Safety Certificate from £199

Evidence: service bundle pricing lists these combinations.

Reasoning

This is a landlord compliance platform. Their strength is bundling. They are not focused on being the local engineer.

Pricing visibility

Strong for bundles.

They show:

EICR + PAT from £129
EICR + EPC from £129

EICR + PAT + Gas Safety Certificate from £199
EICR + EPC + Gas Safety Certificate from £199

Evidence: bundle pricing appears directly on the page.

Weakness

For a user searching **Landlord Gas Safety Certificate Wolverhampton**, landing on an EICR-first page is not ideal.

Booking process

Strong quote CTA.

They use:

- “Get Instant Quote & Order Online”
- “Get Instant Quote”
- “get quote in 30 seconds”
- residential/commercial property selector

Evidence: the hero says “Get Instant Quote & Order Online” and “Select Your Property as appropriate and get quote in 30 seconds.”

Weakness

It appears quote/order-focused, not necessarily live calendar-confirmed.

Supreme Gas implementation

Do not make the same PPC mistake. Every ad must match landing page exactly:

Keyword: Landlord Gas Safety Certificate Wolverhampton

Landing page: /landlord-gas-safety-certificate-wolverhampton

Keyword: EICR Wolverhampton

Landing page: /eicr-wolverhampton

SEO/PPC structure

This is paid search, not organic dominance.

The PDF says it was the **top sponsored result** for landlord gas safety certificate Wolverhampton.

Reasoning

They are buying intent. Supreme Gas can eventually use PPC, but the better initial strategy is:

Organic local SEO + Google Business Profile + strong conversion landing pages

Trust signals

Moderate.

They present themselves as a nationwide service with flexible availability and bundle discounts. Evidence: the page says “Flexible Availability & Nationwide Service” and “Multi-Service Order Discount Available.”

Weakness

No local engineer identity. No Wolverhampton-specific trust on the analysed page. No personal Gas Safe engineer positioning.

Customer journey

Current Nationwide Surveyors journey:

Google sponsored ad
→ EICR landing page
→ quote/order online
→ bundle options
→ order/enquiry

Assessment

Good for compliance bundles. Weak if the user only wants CP12 quickly.

Weaknesses

1. **Intent mismatch**
Gas safety search → EICR page.
2. **National platform, not local engineer**
3. **No Wolverhampton-specific landing page from the provided URL**
4. **Bundles are strong, but may confuse single-service CP12 buyers**
5. **No verified live appointment calendar**

6. No named engineer or Gas Safe number visible in the cited hero section

What Supreme Gas should copy

- instant quote language
 - service bundles
 - landlord compliance positioning
 - residential/commercial selector
 - multi-service discount
 - order online CTA
-

What Supreme Gas should do better

Claude implementation recommendation

Build landlord bundle cards:

CP12 Only

From £45

Same-day digital certificate

CP12 + Boiler Service

From £79/£85

Best for annual landlord compliance

CP12 + EICR Partner

Price on request / partner quote

One landlord compliance booking

CP12 + EPC Partner

Price on request / partner quote

Useful for new tenancies

Ad/SEO landing rule:

Every keyword gets its own exact landing page.

No gas safety advert should land on an EICR page.

Scores

Category	Score
SEO/PPC visibility	8/10
Conversion	7/10
Trust	7/10
Speed	7.5/10
Booking ease	6.5/10
Content quality	7/10

11. OpenRent

Search used

Landlord Gas Safety Certificate Wolverhampton

Website

<https://www.openrent.co.uk/gas-safety-certificate-cp12>

Search rank

Second sponsored result.

Core finding

OpenRent is one of the most dangerous landlord competitors because it already owns landlord attention.

It is not a gas engineering company. It is a **landlord platform** offering gas safety as an add-on service inside a wider landlord ecosystem.

Services offered

OpenRent's navigation/service ecosystem includes:

- property advertising
- tenancy creation
- referencing
- gas safety
- EPC
- electrical safety
- rent collection
- management plus
- inventory
- photography
- rent insurance
- landlord insurance
- accompanied viewings
- mid-tenancy inspection
- legal support

Evidence: the OpenRent navigation lists these landlord services, including Gas Safety, EPC, Electrical Safety, Rent Collection, Inventory, Insurance and Legal Support.

Reasoning

This means OpenRent has a powerful advantage: landlords may already be using it for lettings, tenancy setup and compliance.

Supreme Gas cannot beat OpenRent as a landlord platform immediately. It can beat OpenRent on **local service speed and direct engineer control**.

Pricing visibility

OpenRent is generally strong on pricing for landlord products, but the fetched page section visible mainly shows sign-in/navigation and service categories, not the exact CP12 price lines. Because the exact price was not visible in the cited fetched section, do not quote a price here unless checked directly in browser at time of use.

Supreme Gas implication

Use fixed pricing openly:

CP12 Wolverhampton from £45

Extra appliance clearly priced

Boiler service add-on clearly priced

Booking process

OpenRent's page requires or encourages account login/registration as part of the platform journey.

Evidence: the fetched page shows sign-up/login, email sign-in, Google/Outlook/Yahoo sign-in and account creation flows.

Strength

Good for existing OpenRent landlords.

Weakness

For a landlord who only wants a quick CP12, account/platform friction can slow the journey.

Supreme Gas implementation

Make booking possible without account creation:

No account needed.

Book CP12 in under 60 seconds.

Receipt and certificate emailed automatically.

Optional landlord dashboard after booking.

SEO/PPC structure

The PDF confirms OpenRent appeared as a **sponsored result** for the landlord gas safety certificate search.

Reasoning

This is paid acquisition. OpenRent can outspend smaller companies, but a local company can still beat them on conversion if the landing page is more direct.

Trust signals

Strong platform trust.

The navigation proves OpenRent is a broad landlord platform with many landlord services.

Weakness

The trust is platform-based, not engineer-based. The landlord may not know who is attending.

Customer journey

Current OpenRent journey:

Google ad

→ OpenRent CP12 page

→ account/login/platform flow

→ order service

→ OpenRent coordinates provider

Assessment

Strong if customer is already in OpenRent ecosystem. Weaker if customer wants immediate direct local engineer.

Weaknesses

1. **Platform friction**
Login/sign-up flow appears on page.
 2. **Not local engineer-led**
 3. **No immediate personal engineer trust**
 4. **May feel like a network/subcontractor model**
 5. **PPC dependency for this search**
 6. **Less suitable for repairs after failed CP12**
Supreme Gas can immediately offer repair/service/install support after inspection.
-

What Supreme Gas should copy

- landlord-specific positioning

- simple service ordering
 - compliance ecosystem
 - EPC/EICR adjacency
 - account/dashboard idea later
 - professional platform feel
-

What Supreme Gas should do better

Claude implementation recommendation

Build an OpenRent-style landlord convenience layer without account friction:

Book as guest:

- property address
- landlord details
- tenant details
- appliance count
- slot selection
- confirmation

After booking:

- optional account/dashboard
- certificate storage
- invoice storage
- renewal reminder

Positioning copy:

Direct local Gas Safe engineer — not a national platform queue.
Same-day CP12 certificates in Wolverhampton.
Repairs available if your inspection fails.

Scores

Category	Score
SEO/PPC visibility	8.5/10
Conversion	8/10 for existing landlords; 6.5/10 for guest users

Trust	8.5/10
Speed	7/10
Booking ease	7/10
Content quality	8/10

12. GasSafetyCerts.com

Search used

Landlord Gas Safety Certificate Wolverhampton

Website

<https://gassafetycerts.com/gas-safety-certificates-in-wolverhampton>

Search rank

Fourth sponsored result.

Core finding

GasSafetyCerts.com is a national/platform-style gas certificate competitor. It is specifically built around gas safety certificate ordering and has a Wolverhampton location page.

This is a more direct CP12 competitor than Nationwide Surveyors because the landing page matches the service/location better.

Services offered

GasSafetyCerts offers:

- residential services
- commercial services
- new build services
- gas boiler inspection
- gas safety check certificate
- landlord gas safety certificate
- gas safety inspection certificate
- homeowners gas safety certificate
- gas safety report
- trade services
- order tracking
- locations
- FAQs
- customer login

Evidence: their navigation lists these service categories, plus Pricing, Testimonials, Track Order, Locations, FAQs, Contact and Customer Login.

Reasoning

This is a focused certificate/compliance platform. Unlike WLV or Andy The Gas, it is less about local heating repairs and more about certification at scale.

Pricing visibility

Moderate.

The Wolverhampton page has “Get An Instant Quote” and pushes users to fill in information to order instantly.

However, the cited page section does not show a fixed Wolverhampton CP12 price.

Supreme Gas implication

Price must be visible before interaction.

CP12 Wolverhampton from £45
Extra appliance +£10/£15
Boiler service add-on +£35/£40

Booking process

Strong but not perfect.

They state:

- “Get An Instant Quote”
- “Fill the required information to order a gas safety certificate instantly”
- Order gas safety check online
- Registered engineer visits within 48 hours

Evidence: the page says users fill required information to order a gas safety certificate instantly. Their 4-step process says “Order a gas safety check online” and that a registered engineer will visit within 48 hours.

Strength

They have an online ordering journey and a 48-hour attendance promise.

Weakness

48 hours is beatable locally. Also, “order instantly” is not the same as “choose a confirmed live slot instantly.”

SEO/PPC structure

The page has:

- exact location/service H1: **Gas Safety Certificates in Wolverhampton**
- breadcrumb Home → Locations → Gas Safety Certificates in Wolverhampton
- landlord-focused content
- instant quote CTA
- location page structure

Evidence: the H1 is “Gas Safety Certificates in Wolverhampton,” with breadcrumb structure and landlord content.

Reasoning

This is a strong local landing page model. Supreme Gas should copy the structure but make it more local/personal.

Local relevance

Moderate.

They have a Wolverhampton page, but the phone number is a London-style **020** number, and opening hours are Monday–Thursday 8am–6pm, Friday 8am–5:30pm.

Reasoning

This feels national, not Wolverhampton-local.

Supreme Gas can beat this with:

Wolverhampton local number
local engineer photo
local area map
direct WhatsApp
same-day/next-day claim if true

Trust signals

Moderate to strong.

They show:

- Trustpilot link
- customer login
- track order
- phone number
- location page
- online order process
- registered engineer claim

Evidence: the navigation includes Trustpilot, Track Order and Customer Login, and the 4-step process says a registered engineer visits within 48 hours.

Weakness

No local engineer identity. No visible local reviews in cited section. No local Gas Safe number in header.

Customer journey

Current journey:

Google ad
→ Wolverhampton gas certificate page
→ instant quote/order form
→ order online
→ engineer visit within 48 hours

Assessment

Strong. Beatable through local identity, fixed price, same-day slots, and repair capability.

Weaknesses

1. **National feel**
 2. **020 number rather than local Wolverhampton number**
 3. **No fixed price visible in cited page section**
 4. **48-hour visit is beatable locally**
 5. **No named engineer**
 6. **No visible instant live calendar**
 7. **Repairs after failed certificate are not positioned as strongly as a local gas engineer could**
 8. **Opening hours are limited compared with 24/7 enquiry capture**
-

What Supreme Gas should copy

- exact location landing page
 - instant quote CTA
 - online ordering
 - order tracking idea
 - customer login/dashboard idea
 - Trustpilot/review signal
 - certificate-focused navigation
 - FAQ/location architecture
-

What Supreme Gas should do better

Claude implementation recommendation

Create:

Page: /gas-safety-certificate-wolverhampton

Hero:

Gas Safety Certificates in Wolverhampton from £45

Local Gas Safe engineer. Same-day digital CP12. Book online in under 60 seconds.

Booking:

1. Postcode
2. Appliances

3. Tenant access
4. Choose slot
5. Confirm booking
6. WhatsApp/email confirmation

Trust:

Gas Safe number

Google reviews

Real engineer photo

Local Wolverhampton coverage

Certificate sample

Beat 48-hour claim:

Same-day and next-day CP12 slots available where capacity allows.

Do not promise same-day unless operationally real.

Scores

Category	Score
SEO/PPC visibility	8/10
Conversion	7/10
Trust	7.5/10
Speed	7/10
Booking ease	7/10
Content quality	7.5/10

13. Checktrade / Directory Competitors

Why Checktrade was excluded from normal competitor ranking

Checktrade was excluded because it is not a gas engineering business. It is a **directory marketplace / lead-generation platform**.

The PDF repeatedly says rankings were considered “excluding Checktrade” or “excluding top being Checktrade,” which means Checktrade was appearing above direct service-business websites for these searches.

What type of website is Checktrade?

Checktrade is a marketplace that ranks many tradespeople and lets customers:

- compare providers
- view reviews
- call companies
- request quotes
- sometimes book fixed-price services

Evidence: the Wolverhampton CP12 page lists multiple businesses, review scores, review counts, service skills, call buttons and request-quote options.

Is Checktrade direct competition?

Not direct competition operationally

Checktrade does not usually perform the gas work itself. It sends leads to trades.

Direct competition for attention

It competes strongly in Google search because users may click Checktrade before seeing independent local websites.

Direct competition for trust

Customers may trust Checktrade because it shows reviews, ratings and multiple options.

Checktrade pricing and booking

Checktrade Express shows:

- “Book instantly with fixed pricing”
- Gas Safety Certificate CP12
- “Book now from £79”
- £79 visible price

Evidence: the Wolverhampton CP12 page shows Checktrade Express with “Book instantly with fixed pricing,” “Gas Safety Certificate (CP12),” and “Book now from £79.”

Reasoning

This is important. Checktrade is no longer just “request quotes.” It is moving into instant fixed-price booking.

This means Supreme Gas must not only beat local engineers. It must beat platforms on convenience.

Checktrade trust signals

The page shows multiple local providers with strong ratings, for example:

- WLV Plumbing & Heating Ltd: **9.65, 68 reviews**
- Midlands Gas & Plumbing Solutions: **9.84, 325 reviews**
- Celmeng Plumbing and Heating: **9.79, 136 reviews**

Evidence: these ratings and review counts appear on the Checktrade Wolverhampton page.

Reasoning

Checktrade creates trust through comparison. The user feels they are making a safer choice because they can compare multiple trades.

Why Checktrade is a threat

Checktrade intercepts users at the top of the funnel:

Google search

→ Checktrade page

→ user compares trades

→ user calls/request quotes/books through platform

This means Supreme Gas must make the direct website more attractive than a directory.

Why Supreme Gas can beat Checkatrade

Checkatrade adds friction:

- customer sees many options
- can get choice overload
- may need to request quotes
- may not know who will respond fastest
- pricing may start at £79 for CP12 Express
- platform relationship is less personal

Supreme Gas can beat this with:

Direct booking
Lower visible CP12 price
Local engineer identity
Same-day digital certificate
WhatsApp confirmation
Repairs available
Annual reminder included

Claude implementation recommendation

Add a section:

Why book directly with Supreme Gas?

Directories:

- Compare multiple companies
- Wait for replies
- Higher platform pricing
- Less direct communication

Supreme Gas:

- Book directly with a local Gas Safe engineer
- CP12 from £45
- Instant confirmation
- Same-day digital certificate
- WhatsApp updates
- Annual reminder included

Avoid directly naming Checkatrade in aggressive copy. Use “directory sites” or “comparison websites.”

Part 2 Summary: Strategic Lessons

Strongest competitors in Part 2

Competitor	Main strength	Main weakness
WLV	Reviews, brand trust, pricing, service depth	Not CP12-first, no verified live booking
British Gas	National trust, infrastructure	Expensive/corporate/national
J & E	Exact-match domain	Verification/loading friction, limited verified content
NK Gas	Local service structure, Gas Safe number, WhatsApp, emergency trust	Manual booking, no verified live calendar
Nationwide Surveyors	Instant quote, compliance bundles	EICR page mismatch for gas search
OpenRent	Landlord platform trust	Account/platform friction, not local engineer-led
GasSafety Certs	Certificate-focused landing page and online order	National feel, 48-hour visit, no local identity
Checkatrade	Search dominance, reviews, fixed-price Express	Directory friction, less direct, CP12 from £79

Updated Supreme Gas / BSCJ Gas Website Blueprint

Core winning position

Local Gas Safe engineer + national-platform convenience + lower CP12 entry price + landlord automation.

Homepage hero

Gas Safety Certificate Wolverhampton from £45

Book online in under 60 seconds.

Final Claude instruction

Build Supreme Gas as the fastest direct-booking local gas platform in Wolverhampton.

It should combine:

- Homemove's SEO page structure
- WLV's review/trust presentation
- NK Gas's service navigation and Gas Safe visibility
- OpenRent's landlord platform logic
- British Gas-style booking updates
- Checkatrade Express-style fixed pricing
- but improve all of them with direct local engineer trust, lower CP12 pricing, WhatsApp automation, live booking, same-day digital certificates and annual landlord reminders.
